

Aadhirai Pharma

Offline Edition — Installation & User Guide

Getting Started — No Installation Needed

This app is portable — there is nothing to install. Just double-click the .exe file to run it.

- The very first time you open it, it takes about 10 seconds to start up (it's unpacking itself) — this is normal, just wait for the window to appear.
- Every time after that, it opens the same way — no setup wizard, no installer screens.
- You can keep the .exe anywhere: Desktop, a folder, even a USB drive.

Creating a Desktop Shortcut

Since there's no installer, here's how to put a shortcut on your Desktop for quick access:

1. Right-click the "Aadhirai Pharma" .exe file.
2. Choose "Send to" > "Desktop (create shortcut)".
3. A shortcut icon will appear on your Desktop — double-click it any time to open the app.

First-Time Setup

The first time you open the app, you'll see two choices:

- "Start Fresh" — for a brand-new pharmacy. You'll create your own admin username, password, and a recovery question (used later if you forget your password).
- "Restore from Backup File" — if you're moving from another computer or recovering from a backup, this brings back your existing data and login exactly as it was.

Your free trial (30 days) starts automatically the moment you first open the app.

Frequently Asked Questions

Does this need internet to run?

No. Once it's open, everything works completely offline. Internet is only needed once, to activate your license.

What happens when my free trial ends?

You'll see a reminder banner counting down the days before that happens. Once it ends, the app will ask you to activate a license before you can continue — your data is never deleted, you just need to activate to keep working.

Can I use this on a different computer?

Each license is tied to one specific computer. If you need to move to a new computer, contact your administrator with the new computer's Machine ID (shown on the Activate screen) to get a new license issued.

Is my data backed up automatically?

Yes — the app can take automatic backups on a schedule you choose from Settings > Backup.

How to Recover If Something Goes Wrong

I forgot my password

1. On the login screen, click "Forgot password?"
2. Enter your username, then answer the recovery question you set up when you created your account.
3. Set a new password — you're done, no need to contact anyone.

If you also don't remember the answer to your recovery question, you'll need to use "Reset All Data" below and set up again — or contact your administrator.

I want to start completely over (erase everything)

On the login screen, click "Reset All Data" at the bottom. You'll be asked to confirm, since this permanently deletes everything — medicines, sales, customers, and every login. A backup is taken automatically first. After confirming, the app returns to the first-time setup screen.

The app won't open, or something looks broken

- Make sure you're double-clicking the correct .exe file, and give it up to 20 seconds on first launch.
- Try restarting your computer and opening it again.
- If a backup exists (Settings > Backup, or the "backups" folder next to your data), you can restore from it via "Restore from Backup File" on the setup screen after using Reset All Data.
- If none of this helps, contact your administrator (below) with a description of what you saw on screen.

Need Help? Contact Your Administrator

Contact us on any of these numbers — WhatsApp or phone:

- India: +91 85087 16957
- India: +91 82481 95768
- Singapore: +65 9035 6479

Have your Machine ID ready (shown on the Activate screen) if your question is about licensing or activation.
